Formica Corporation has developed a fabrication technique that will help fabricators improve the appearance of drop edge build-up seams. This fabrication technique will work for all Everform™ Solid Surface designs, but it is critical when working with dark colors. This technique has been developed to insure the highest quality finished product by minimizing visible (white) seams in drop edge build-up assemblies. During final finishing, in our manufacturing facility, the back of the sheet is sanded using 100-grit sandpaper with a wide belt sander. This process enables us to maintain thickness tolerances and ensures a consistent flat back of the sheet. The back sanding, however, creates whiteness on the back of the sheet that, if not removed, could create a visible seam in drop edge build-ups.

**TO ACHIEVE THE BEST POSSIBLE EDGE APPEARANCE WITH DARK COLORS:**
- Sand the back side of the countertop deck (in the drop edge area) and sand the face and back of each edge strip with 120-grit (100 micron) sandpaper using a random orbital sander.
- Sand until the white linear lines have been removed from the back of the sheet/strip and the face has been roughed up enough to insure proper bonding.
- Always glue the face of the material to the back of the next piece in the drop edge assembly.
- Use recommended color matched adhesive.

**FINISHING DARK COLORS**
Formica Corporation fabrication techniques that will help fabricators improve the appearance of the finish in dark colors. These fabrication techniques will work for all Everform™ Solid Surface designs, but it is critical when working with dark colors.

Everform™ Solid Surface sheets, InDepth Surfacing and molded shapes are finished to a satin finish in the factory but fabrication and installation operations, as well as customer selection of other finishes, make it necessary for the fabricator and/or installer to adjust the final finish.

The abrasive mineral of choice for finishing solid surfacing material is aluminum oxide. It is available in various sizes from coarse to extremely fine in either the P-graded grit or micron forms. We recommend using the Micron system for sanding. Below is a chart of the standard grits that are available. 100 micron would be the coarsest and 15 would be the finest on this chart.

**MICRON SYSTEM**

<table>
<thead>
<tr>
<th>Micron</th>
<th>100 micron</th>
<th>80 micron</th>
<th>60 micron</th>
<th>40 micron</th>
<th>30 micron</th>
<th>15 micron</th>
</tr>
</thead>
</table>

**NON-WOVEN NYLON ABRASIVE PADS**
Used for final finishing to matte or satin finish, maintenance, etc. Generally used in two grades:

- **Maroon**: (very fine) for matte finish 3M Scotch-Brite #7447 Mirka® Mirlon #447
- **Gray**: (ultra fine) for satin finish 3M Scotch-Brite #7448 Mirka® Mirlon #448

When sanding dark colors, it is important to not skip the progression of grit or micron. For example it would be incorrect to sand with 100 micron and skip to 60 micron when sanding dark colors. The correct step would be 100 micron, 80 micron, 60 micron.

Always clean thoroughly between sanding steps. Particles from the abrasive pads could be left on the surface, so when the next step of sanding occurs, larger particles will cause “swirls” and create a poor finish.

In most cases, solid surface countertops should be installed with a “matte” finish. This is achieved by sanding to 60 micron and then a maroon abrasive pad 3M Scotch-Brite #7447. To enrich the color of the dark colors, it may require extra steps of sanding. A “satin” finish may be required. To achieve this sand with 100 micron, 80 micron, 60 micron, 30 micron and a gray abrasive pad 3M Scotch-Brite #7448. Sanding wet with the #7448 will create a more uniform finish. The use of a 500 grit Abralon pad made by Mirka also helps bring the color out of a dark color.

There are also many quality manufactures of large profile sanding equipment that will increase your productivity and help you sand to a high quality finish. Gem Industries www.gemindustries.com and Pinske www.pinske-edge.com are just a couple.

EVERFORM™ SOLID SURFACE
DARK COLOR FABRICATION TECHNICAL BRIEF

FINISHING EVERFORM™ SOLID SURFACE
Everform™ Solid Surface sheets and molded shapes are finished to a satin finish in the factory but fabrication and installation operations, as well as customer selection of other finishes, make it necessary for the fabricator and/or installer to adjust the final finish.

There are three basic finishes that are used. Each of these have certain advantages and disadvantages which should be seriously considered for each application. The properties of these finishes are described below:

<table>
<thead>
<tr>
<th>MATTE</th>
<th>SATIN</th>
<th>DARK COLORS</th>
<th>POLISHED</th>

IMPORTANT NOTICE
See www.formica.com for the most current technical data and warranty information, which is the only authorized source for this information.

MANUFACTURER
Everform™ Solid Surface products are toll manufactured in accordance with Formica Corporation’s product specifications and quality requirements.

TECHNICAL SERVICES
Technical assistance may be obtained through your local Formica® Brand Products Distributor or from Formica Corporation trained representatives in sales offices throughout the country. To assist these representatives, Formica Corporation maintains a sales and technical services staff in Cincinnati, Ohio. For technical assistance, contact your distributor or sales representative; write the company directly at Formica Corporation Technical Services Department, 10155 Reading Road, Cincinnati, OH, 45241; call (513) 786-3578 or 1-800-FORMICA™; or fax (513) 786-3195. In Canada, call 1-800-363-1405. In Mexico, call (525) 530-3135.
